HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L’archive ouverte pluridisciplinaire HAL, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d’enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.
The pitfalls of signature - Questioning affiliation in French higher education institutions

Marianne Noël - LISIS, Univ Paris-Est, CNRS, INRA, UPEM, ESIEE Paris, Champs-sur-Marne, France - noel@ifris.fr

High-level managers

Researchers

Scholarly communication specialists

Publishers

Background and context:
- Accountability regime (Wouters, 1999)
- Challenge for individuals and institutions to be easily identified
- 10 years of new funding schemes and structures in France (the “millefeuilles” pastry phenomenon)

Method:
A participatory/reflexive approach

Actors are pulled back and forth between conflicting and non-coordinated demands and emphasize unintended effects of the tagging/tracking activities.

Researchers: a confusing situation due to multi-affiliations status; uncomfortable feeling with the signature that should be technical and not personal; affiliations reflect multiple socialities.

Scholarly communication specialists: job profile moving to “data scientist” (from library to bibliometrics); necessity to collaborate with publishers (Elsevier) despite disagreement upon Open Access.

Publishers: selling products in a more competitive landscape in the frame of public procurements.

High-level managers: key issues at stake like increasing visibility, reliability of benchmarkings and better self-understanding.

Unexpected effect: Analyses reveal that, despite Civil engineering being the main activity of the institution, it is not the most important domain where researchers publish their work in. It has consequences on its position in international rankings.

Perspectives: Work in progress...

Recommendations and efforts are quite ineffective. Is it specific to the French case?
